

Support for your AS and A-level Maths and Further Maths students

- **revision before module exams**
- **helping students understand work missed due to absence**
- **helping weaker students.**

Alyce Merry (previously Further Mathematics Network Somerset Manager and now a Further Mathematics Support Programme Associate) has been working with sixth-form maths students at Richard Huish College in Taunton within the college's "workshop" scheme.

Students sign up for twenty minute slots to work through their current problems, or to get help with revision/assignments. These workshops are very popular and form part of the college's system for student support throughout the year, but are especially welcome just before modular exams.

Alyce would like to offer a **free** whole day or part-day workshop session at your school/college. The session can cross over your normal lunch break if that would enable more students to book. All Alyce needs is a desk in a room with two chairs (more chairs if students booked for workshops in small groups), and for you to advertise the workshops in advance and create a booking sheet for students to sign up for twenty minute slots.

If you think your students might benefit from this offer at any time, please contact Alyce directly (alycemerry@furthermaths.org.uk).

Please also contact Alyce if you would be interested in help with STEP preparation.
